

DevOps Support Engineer -

Full JD -

Experience - 5+ years

Time - 8 hrs/day - IST

Budget - Open for discussion

Location - Remote

Key Responsibilities:

- Architect, implement, and maintain cloud-native infrastructure on AWS or GCP.
- Manage production Kubernetes clusters (EKS, GKE, or self-hosted).
- Build and optimize CI/CD pipelines using Jenkins.
- Monitor & maintain production environments ensuring high availability.
- Implement observability tools (Prometheus, Grafana, ELK).
- Enforce security best practices (IAM, secrets management, compliance).
- Collaborate with cross-functional teams, participate in Agile ceremonies, and engage with clients.
- Define and implement Infrastructure as Code (Terraform – nice to have).
- Drive cloud cost optimization (FinOps).

Required Skills & Experience:

- 5+ years DevOps/SRE experience.
- Strong expertise in AWS or GCP.
- Hands-on experience with Kubernetes & Jenkins.
- Strong in debugging, observability, networking & incident management.
- Agile workflow experience (Jira).
- Excellent communication & mentoring skills.

Nice to Have:

- Terraform, GitOps, ArgoCD.
- Service Mesh (Istio, Linkerd).
- Cloud cost optimization experience.
- Certifications: AWS/GCP Architect, DevOps Engineer, or Kubernetes (CKA/CKAD).
