

Job Title: Full Stack Developer

Location: Remote

Employment Type: Contract

Budget & Experience: We are expected to provide top-quality candidates at the most affordable rates, and can propose multiple options balancing talent and cost effective

Job Summary:

We are looking for a skilled Full Stack Developer who is proficient in both frontend and backend development. The ideal candidate will contribute to building new features, integrating them into the existing UI, and enhancing the overall architecture. Strong communication skills and a proactive, solution-oriented mindset are highly valued.

Frontend Requirements:

- **Primary Stack:** React.js with Vite
 - **UI/UX:** Strong design sensibility is a must
 - **API Integration:** Experience in consuming RESTful APIs using Axios or Fetch
 - **Styling:** Proficiency in modern CSS and familiarity with component libraries such as Material-UI or Ant Design
 - **Note:** While the current frontend is built using React.js and Vite, we are open to alternative frameworks based on your expertise and recommendations
-

Backend Requirements:

- **Technology Stack:**
 - C# / .NET 8.0
 - ASP.NET Core
 - ABP Framework (abp.io)
 - MongoDB (mandatory)

- **Experience:**

- Solid understanding of ABP architecture and its core modules
- Strong hands-on experience working with MongoDB
- Ability to design, build, and maintain scalable backend services

Key Responsibilities:

- Develop and implement new features on both frontend and backend
- Integrate backend APIs with frontend UI components
- Collaborate with designers and other developers to ensure cohesive and performant applications
- Suggest architectural improvements or alternative tools where applicable
- Write clean, maintainable, and efficient code

Preferred Attributes:

- Strong problem-solving skills and ability to think out of the box
- Excellent communication and collaboration abilities
- Open to feedback and capable of proposing new ideas
